

REGIONAL GROWTH BY  
TRADITIONAL NEIGHBORHOODS

*The region idealized: new developments take the form of complete neighborhoods, either within the city or along existing transportation corridors (Drawing by Thomas E. Low, DPZ)*

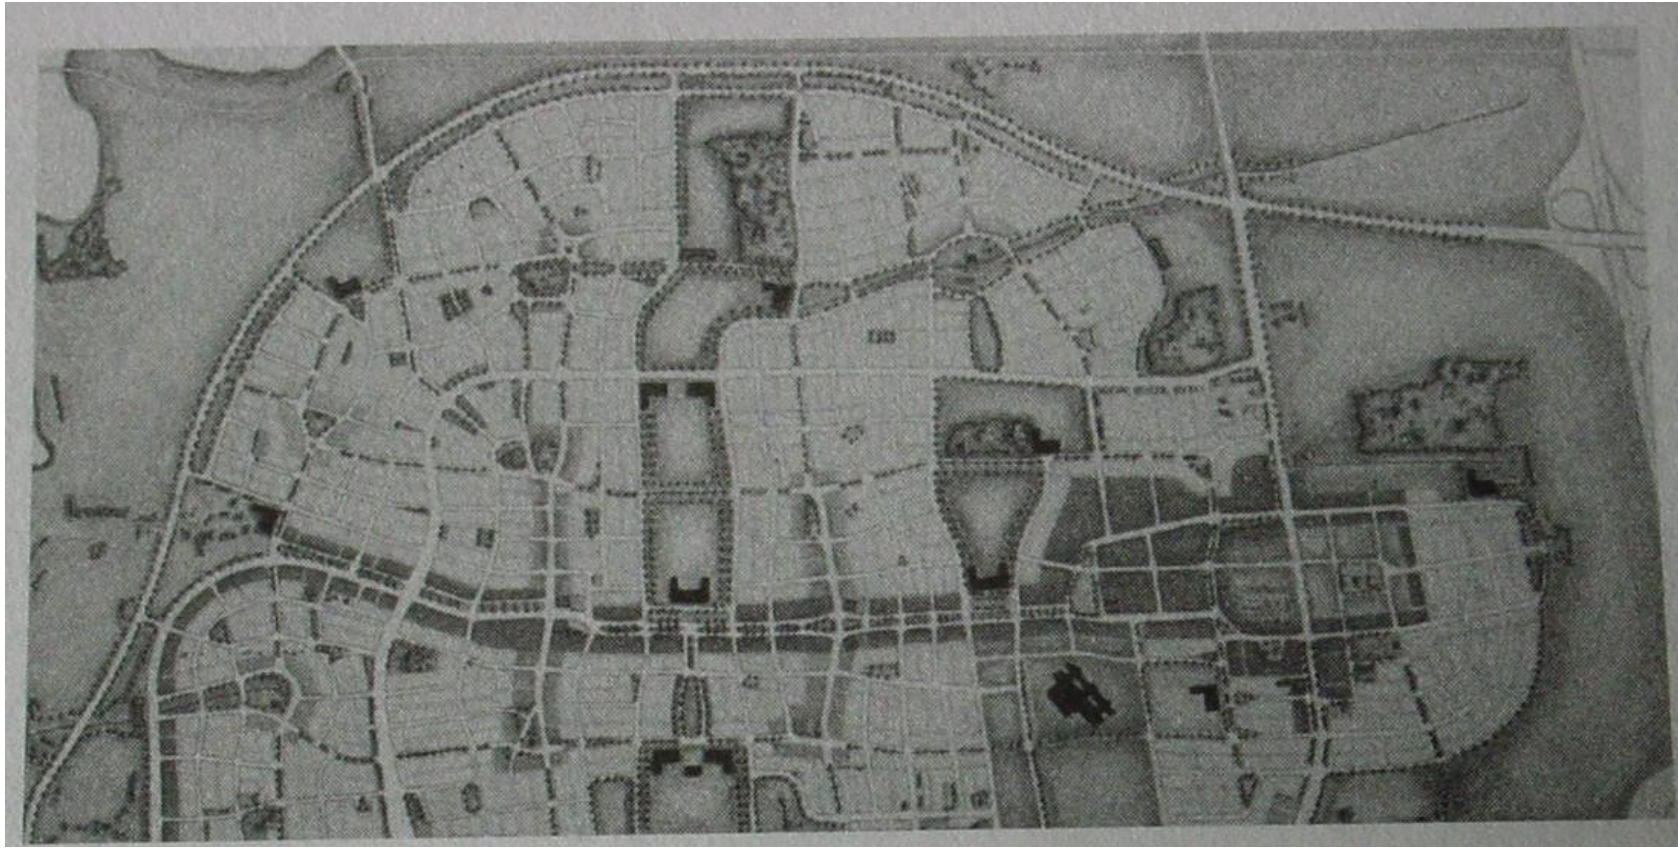

*A healthy city as the basis for a healthy region: expansion occurs in the form of complete neighborhoods (Drawing by Thomas E. Low, DPZ)*

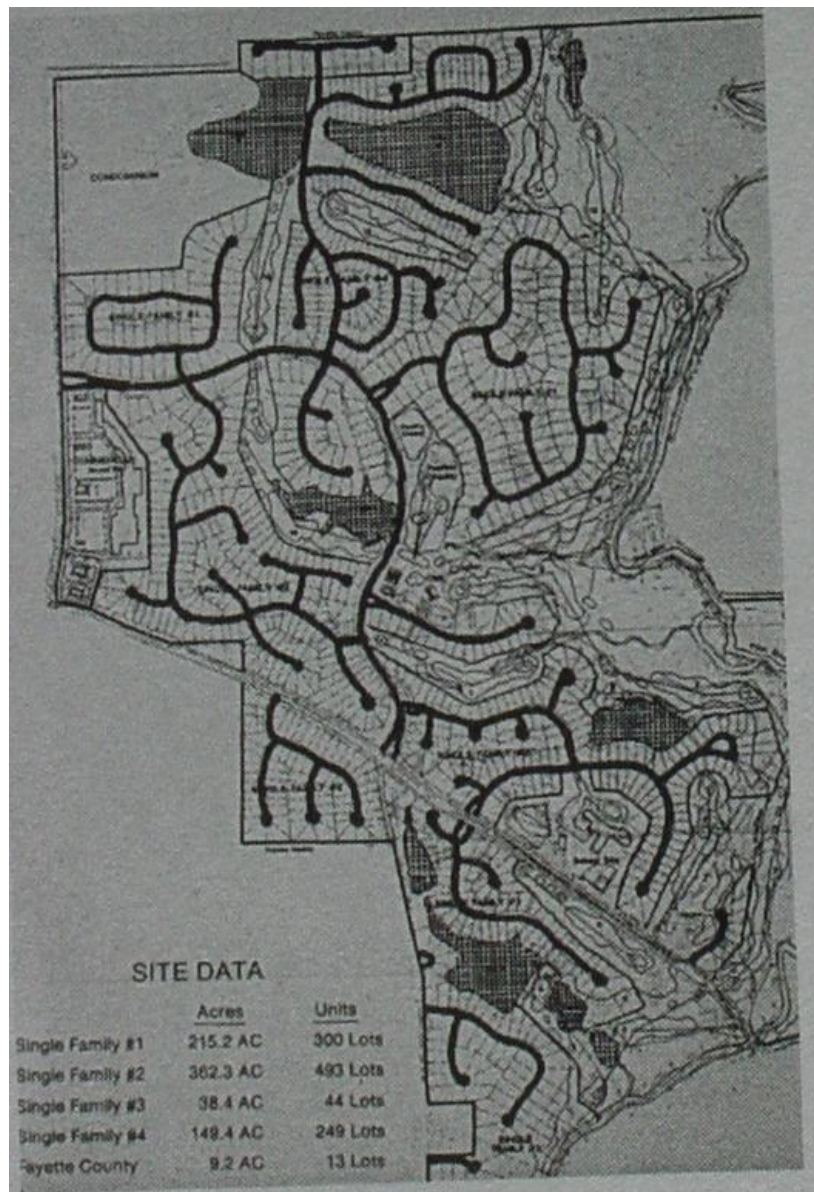

*The "pedestrian shed" of the five-minute walk applied to the plan of Cornell: almost every residence is within five minutes of shopping and a bus stop*

*The plan of Cornell, Ontario: a new town  
divided into distinct neighborhoods*

*Chicken scratch: the typically disorienting suburban street pattern that winds back on itself*

*The village on the hill: the plan of Middleton Hills was largely determined by sloping site conditions*

*Rejecting the gate: Seaside connects directly into the Seagrove street grid to its east*
